-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Information Disclosure Statement

1. The information disclosure statement filed 4/30/2004 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. Items AF and AH have not been considered since these references are not in English nor have an explanation of relevance. The other items found in the IDS have been considered.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 6-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Sipila (WO 96/19065).

Regarding claim 6, Sipila discloses a method for controlling data between a terminal (DTE) and a data transmission device (PP) with a first V.24 data transmission apparatus connected to said data terminal by a first V.24 cable containing data lines as shown in figure 1. According to the standard, RTS (105) and CTS (106) signals are transmitted between a DTE and a modem (page 3, lines 7-14). Figure 6 shows the status of these signals on the lines in the cable. An air interface is between the first and second V.24 data transmitters as shown in figure 1. The terminals will transmit command information to each other as shown in figure 6. The status signal can be transmitted according to the standard as stated on page 3, lines 1-14. This is the "hardware handshake". In addition, the data flow control is also possible to use XON/XOFF messages transmitted on the data channel (page 3, lines 16-18). This is the "software handshake". The transmitter and receiver will be capable of transmitting and receiving the signals according to either method of handshaking.

Regarding claim 7, as stated above, Sipila discloses utilizing an XON/XOFF protocol (page 3, lines 16-18).

Regarding claim 8, the commands between the terminals comply with the AT HAYES standard (page 15, lines 11-14).

Regarding claim 9, the DTE is a computer and the PP is a modem.

Regarding claim 10, the frames comply with the DECT protocol to be radio transmitted via an air interface (abstract).
